## Abstract

The Final exam solution of exercise XX. An implementation of Arctangent and Arccotangent using complementary and mutual recursion methods for a more efficient algorithm by solving their generating differential equation.

## Problem description

## Implementation and Solution

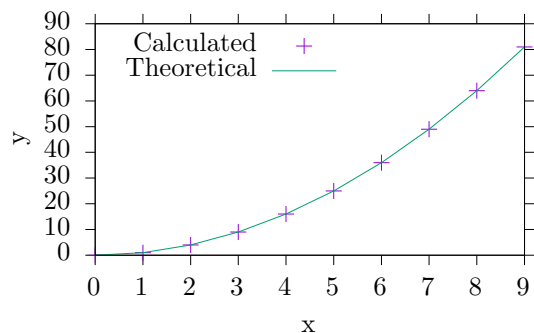

Figure 1: Comparison between the calculated arctangent function using the differential equation found in "myarctan.c" and the arctangent function from the math.h library.

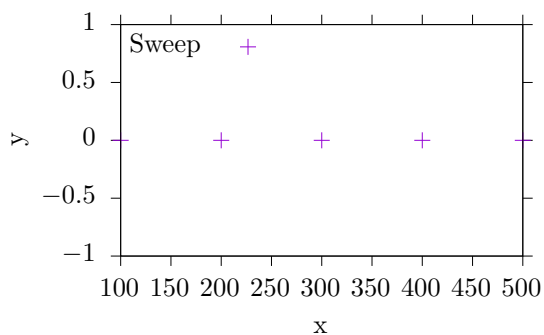

Figure 2: Examination of the computing time as a function of...
